Dear Dr Anderton

RE: OXYGENICS SHOWERHEADS AND THE LEGACY HOTEL GROUP

It is with pleasure that I write to you regarding the Oxygenics water and power-saving showerheads that you have supplied to the Legacy Hotel Group.

Following successful performance testing of the SkinCare Showerhead (ETL code # 60120), we installed these units in a number of our hotels and lodges, as a pilot project. The aim was to determine the potential water and power savings Legacy could achieve through a group-wide installation, and whether these savings corresponded with the estimates provided by Eternally Solar.

I am pleased to be able to report that there were large savings of both water and electricity whilst the showerheads still provided an invigorating shower — surprising performance given the flow rate of approximately 8-9 litres per minute.

As a result of this pilot, Legacy have decided to specify the Oxygenics SkinCare across the entire Group, which will result in an enormous reduction in our utility bills. Additionally, we will be saving very large quantities of water, power and carbon emissions, as well as helping to reduce waterway pollution through overstressed waste-water treatment plants. All of these environmental benefits are sorely needed right across South Africa.

We are aware of your initiative, the 'SA EnviroChallenge' which, through the widespread encouragement to install water and power efficient showerheads countrywide, will help homeowners and the hospitality industry to save on ever increasing utility bills, whilst they simultaneously make a real contribution to conserve South Africa's precious resources.

The Legacy Group wishes you success in achieving the EnviroChallenge goals and thank you for providing us with such a simple yet quality solution to our ever rising costs.

With kind regards

MIKE DEVEREUX
